

Discovery Interview Guide

AI Ambient Scribe · Hospital Pilot Research

Germany / Europe | Stage 1 · Discovery | June 2026

Purpose of These Interviews

Before writing a single line of code, the most valuable thing you can do is listen. These six questions are designed to surface the two things that matter most in Stage 1: whether doctors would actually trust and use the product, and whether the institution has a realistic path to a signed pilot agreement.

Each interview should take 20–30 minutes. Take notes on exact words and phrases doctors use to describe their pain — these become your pitch language later.

P

Physicians & Clinicians

Understanding daily documentation pain and trust thresholds

1

How many minutes per day do you spend on documentation after a consultation?

Why ask: Establishes the baseline pain point in concrete, measurable terms — critical for your ROI pitch later.

2

What does your current note-taking process look like — do you type, dictate, or write by hand?

Why ask: Reveals the workflow you're inserting into and flags any existing tools you'll need to displace or integrate with.

3

What would make you trust an AI-generated clinical note enough to approve it?

Why ask: Surfaces the trust conditions your product must meet before a doctor will stake their name on its output.

H

Hospital Ops & Department Heads

Mapping procurement pathways and defining pilot success

4

What EHR system are you running, and how open is your IT team to third-party integrations?

Why ask: Determines your integration complexity and whether IT is a blocker or an enabler from day one.

5

What is the approval process for piloting a new clinical software tool — who needs to sign off?

Why ask: Maps the internal decision chain so you know exactly who to reach and what process to follow.

6

What would a measurable success outcome look like for you after a 3-month pilot?

Why ask: Lets the hospital define success in their own words — then you build your pilot agreement around it.

Tip: End every interview with — **"Is there anyone else you think I should speak to?"** The best hospital introductions come from inside the building.
